## Pompous Prognosticators Revisited: 2004-2009

*The experts go into denial as the credit crisis unfolds*

July 2009

By Nick Barisheff

In 2001, Colin Seymour published an article entitled **1927-1933 Chart of Pompous Prognosticators**. In it, he documented the many Depression-era assurances given by politicians, economists, financial experts and the media to the public, protesting that everything was fine and there was nothing to worry about. Meanwhile, the stock market would decline by 92%, the US dollar would be devalued by 40%, real estate would drop 30% and unemployment would soar to 25%.

Today, we have a similar situation. Politicians, economists and the media are assuring the public that everything is fine. But governments around the world are frantically borrowing trillions of dollars to fund bailout and stimulus plans, the stock markets have lost over 40% of their value, real estate over 50%, and unemployment is approaching 10% in most major countries.

- Jim Cramer, CNBC [June 2009]

Just as Seymour's Pompous Prognostications proved devastating for those investors who remained complacent due to those false assurances, today's investors would be wise to educate themselves on the real risks and vulnerabilities they face today. In order to preserve their wealth over the coming years, investors need to make wise, informed decisions, stop being complacent, and avoid following the false assurances of politicians and financial experts. With countless risks and vulnerabilities facing the world, the next 20 years will not be the same as the last 20 years.
